Plants need many elements to grow and show all their fantastic colours. In a closed system like an aquarium, all these elements must be very pure to keep our environment safe and clean. For that reason, we decided to use ingredients with a pharmaceutical quality also for our fresh water products.
**Essentials** is a mineral fertilizer specifically designed for the needs of freshwater aquariums. Provides a balanced enrichment system that allows for optimal growth, minimizing the risk of accumulation of a single element.

The dosage can be carried out on a daily or weekly basis, multiplying by seven the daily instructions.

**Iron Fe** is an iron source designed exclusively for use in freshwater aquariums. The balanced formula contains both fast-absorbing iron and slow-release iron, ideal for exceptional and long-lasting greens.

The dosage can be carried out on a daily or weekly basis, multiplying by seven the daily instructions.

**Potassium K** is a primary source of Potassium, one of the most important elements in freshwater.

Potassium deficiency can be recognized by observing the death, yellowing and drying of aquarium plants.

Potassium K does not alter the value of nitrates and phosphates.
